MIG DHMb® Lining System

Exterior and Interior Application

MIG-ESP®
Primer quartz-filled

Product Description

MIG-ESP® Primer quartz-filled is a ready-to-use, solvent-free, quartz-filled and alkali-resistant primer, especially for the **DHMb® Lining System** (DHMb® = Double Hybrid Membrane).
It is suitable for outdoor and indoor use.

Application Area

Suitable as a bonding agent for smooth, non-absorbent substrates.
Before the subsequent application of **MIG** plasters as well as before the use of mineral and pasty products, whose lack of pretreatment can lead to deflagration of the finish plasters.
MIG-ESP® Primer quartz-filled does **not** prevent the discolouration or penetration of foreign substances in subsequently applied coatings.

Substrate Preparation

The substrate must be clean, dry, solid and free of efflorescence, dust and loose parts or release agents (e.g. formwork oil).
Dirty or sandy surfaces must be cleaned entirely through washing, brushing or high-pressure cleaner depending on the substrate.
When cleaning with water, make sure that the substrates are sufficiently dry.
For critical substrates, carry out a tensile adhesion test.

Processing

MIG-ESP® Primer quartz-filled is ready to use. After thorough stirring, generously apply undiluted with a lambskin roller, a brush or a suitable spraying tool and allow to dry.

The object and ambient temperature should not be below + 5°C and not above + 35°C. Prior to application of subsequent coats, ensure that the primed surface is sufficiently dry.

The drying time is approx. 12 hours under normal conditions (+ 20°C/60 % relative air humidity). Lower temperatures and higher humidity extend the drying time.

General Information

Do not mix with other types of material. Cover adjacent components well or protect them against splashes.

Clean tools thoroughly with water after use. The containers must be completely emptied and sent for recycling.

Please consult us in case of doubt regarding processing, substrate or structural features. Otherwise, the provisions of the current standards apply.

Technical Data

Application	exterior and interior
Density	1.45 g/cm³ ± 0.10
Bonding agent base	copolymer dispersion
pH Value	8.0 ± 1.0
Colour	white
Drying time	approx. 12 hours
Processing temperature	+ 5°C to + 35°C

Consumption

MIG-ESP® Primer quartz-filled is applied undiluted.

The coverage rate is approx. 0.20 – 0.30 L/m² depending on the porosity of the substrate and the chosen application method.

Exact quantities can be determined by creating test areas.

Storage

At least 12 months shelf life from date of sale if stored dry, frost-free and cool under proper conditions in original sealed containers.

DHMb® Lining System

Packaging

5 L (per bucket) x 60 buckets (per pallet) = 300 L
15 L (per bucket) x 24 buckets (per pallet) = 360 L
1,000 IBC

Customs Tariff Number

32099000
