- Easy to apply

MIG-ESP® Interior Anti-Microbial delivers the perfect hygiene solution for environments where hygiene is of utmost importance.

MIG-ESP® Interior Anti-Microbial is a hygienic wall and ceiling coating developed for hygiene-critical environments like hospitals, nursing homes, schools, offices, food processing facilities and other public spaces.

Embedded in the coating is the **DHMB® (Double Hybrid Membrane) technology**, an active, microporous membrane that maintains a balanced wall temperature and forms a dry surface on walls and ceilings, thus eliminating breeding grounds for pathogenic microbes. Adding to this outstanding dehumidifying feature is a natural, nontoxic antimicrobial agent that further prevents bacterial growth. According to tests by accredited laboratories, This **germ resistant coating** is proven capable of **killing 99.99% of harmful germs**. This helps minimise the spread of infectious agents.
